1. Executive Summary

VibeHub (vibehub.com.tr) is a **launch-ready Turkish marketplace** where fans buy official merchandise directly from their favorite musicians, comedians, and creators. Built end-to-end over 12 development sprints, the platform now supports the full commerce lifecycle — discovery, checkout, fulfillment, returns, refunds, and analytics — across three native experiences: a public web storefront, a mobile app (iOS + Android via Expo), and a back-office administration console.

Why it matters: Turkish creators today sell merchandise through fragmented channels — Instagram DMs, Trendyol/Hepsiburada (with a take-rate that crushes margins), or one-off vendor websites. There is no neutral, artist-owned, regionally-compliant marketplace. VibeHub fills that gap with built-in Turkish payment (lyzico), Turkish shipping (Aras / Yurtiçi), Turkish e-invoicing (Foriba e-Arşiv), full KVKK compliance, and a default-Turkish UI with English fallback.

Where it stands today:

Dimension	Status
Web platform	✅ Production-deployed at vibehub.com.tr
Mobile app	✅ Built; pending Apple + Google developer verification
Vendor management	✅ Full self-service: apply, edit products, upload images, manage variants/stock, fulfill orders, request payouts
Customer experience	✅ Full lifecycle: browse → cart → checkout → track → refund (with VH-RET barcode return shipping)
Admin console	✅ 20-page dashboard covering vendors, products, orders, finance, content, security, NFC tags
Payment integration	🟡 lyzico architecture complete; live keys pending provider agreement
Shipping integration	🟡 Aras + Yurtiçi architecture complete; live keys pending
E-invoicing	🟡 Foriba e-Arşiv architecture complete; live keys pending
Security & compliance	✅ MFA mandatory, 90-day refresh tokens, audit trail, KVKK-compliant data erasure, daily security digest
Backups & monitoring	✅ Daily Postgres backups, Sentry error tracking, BullMQ queue health, business-metrics dashboard

Immediate next actions (zero new development required):

1. Sign payment provider agreement (Iyzico is preferred — turnkey integration ready)
 2. Sign shipping provider agreements (Aras + Yurtiçi recommended for dual-carrier resilience)
 3. Soft-launch with 5–10 invited artists (3-week beta plan documented)
 4. Public launch when beta retention crosses thresholds
-

2. The Opportunity

Market context

Turkey's creator economy spans music (over 12,000 actively releasing artists per Spotify-for-Artists Turkey data), comedy (rising stand-up scene with sold-out tours), and digital creators (YouTube/Instagram/TikTok with millions-strong fanbases). Yet **the merchandise channel is broken**:

- **Marketplaces** (Trendyol, Hepsiburada, N11) treat creator merch as a long-tail SKU class. Take rates are 18–25%. Algorithmic discovery favors mass brands. Listing requires a corporate seller account.
- **Direct social selling** (Instagram DM, WhatsApp catalog) doesn't scale. No payment escrow. No tracking. No returns SLA. Tax compliance is the artist's burden.
- **One-off Shopify stores** require ~\$2,500/month + technical setup an artist won't manage. No cross-artist discovery.
- **Pirated/unofficial merch** dominates concert venues and street vendors, draining 30-60% of potential merch revenue from the rightful owner.

Total addressable market: even capturing 5% of the official merch spend of the top 500 Turkish artists is a multi-million-TL/year opportunity, with strong unit economics (artist sets price; platform takes a commission).

Strategic moat

VibeHub's differentiation is **regional fit + artist-first design**:

Competitor	Why fans avoid them	Why artists avoid them
Trendyol	"It's where I buy detergent"	High commission, no brand control, lost in algorithm
Hepsiburada	Same as above	Corporate seller account required
Instagram DM	No tracking, awkward payment, refund anxiety	Doesn't scale; tax/legal burden
Direct Shopify	"Where do I find new artists?"	Monthly fee + technical setup
VibeHub	Curated artist marketplace, native TR experience, NFC-verified authenticity	Self-service onboarding, artist-set prices, integrated logistics, automatic e-Arsiy invoices

The NFC tag system (industrial bulk-generation tooling already shipped) enables **physical-product authenticity verification** — fans tap their merch with a phone to confirm it's official and unlock bonus content. No competitor offers this.

3. What VibeHub Is

One-sentence pitch: A neutral, Turkish-first marketplace where fans buy official merchandise directly from artists, with built-in payment, shipping, invoicing, and authenticity verification.

Three user-facing surfaces:

1. **Web storefront** (vibehub.com.tr) — public catalog, artist stores, fan profiles, forum
2. **Mobile app** (Expo, iOS + Android) — focused on fan discovery + ordering + push notifications + NFC scan
3. **Back-office console** (vibehub.com.tr/dashboard) — admin platform-ops + vendor self-service

Three personas served:

- **Fans** (CUSTOMER) — discover artists, buy merch, follow stores, message creators, scan NFC tags
- **Artists / Creators** (VENDOR_OWNER + VENDOR_MANAGER) — open a store, upload products, manage inventory, fulfill orders, request payouts
- **Platform operators** (PLATFORM_ADMIN + GOD_USER) — approve vendors, moderate content, monitor finances, run promotions, handle support

4. End-to-End Workflows

4.1 Fan Journey

Key fan-side capabilities:

Capability	What the fan can do	Already built?
Account	Register (email + password), MFA via emailed OTP, persistent 90-day session, optional 365-day trusted device	✓
Discovery	Browse categories, full-text search, filter by tag/price/category, follow artists, see "trending"	✓
Shopping	Add to cart (server-side, persistent), variant selection (size/color), wishlist	✓
Checkout	Address entry, payment, optional installments via lyzico	✓ (pending live keys)
Post-purchase	Order tracking with carrier polling every 5 min, e-Arşiv invoice download	✓
Returns & refunds	Self-service request with reason, VH-RET barcode emailed, status tracking through depot → refund	✓
Social	Follow artists, send DMs, profile page with avatar/bio, see who visited your profile, forum participation	✓
Mobile-specific	NFC tag scan → server redirect to product/vendor/url, push notifications for order updates, biometric unlock	✓

4.2 Artist / Vendor Journey

Artist self-service capabilities (NEW in Sprint 12 — previously these required admin help):

Capability	Endpoint / UI	Permission required
Apply to become a vendor	POST /vendors/apply (public form at /vendors/apply)	None (public)
Edit store profile (logo, banner, bio, brand color)	/dashboard/vendor/profile	STOREFRONT_EDIT (default)
Create products	/dashboard/vendor/products "+" button	PRODUCT_CREATE (default)
Edit products after creation	/dashboard/vendor/products/[id]	PRODUCT_EDIT (default)
Upload product images (multi-image, reorderable)	Same editor, drag-drop	PRODUCT_EDIT (default)
Manage variants (sizes, colors, SKUs, per-variant price)	Same editor, variant table	VARIANT_MANAGE (default)
Adjust stock per variant	Same editor, +/- buttons	INVENTORY_EDIT (default)
Submit product for admin review	"Submit for review" button	PRODUCT_SUBMIT (default)
Publish product directly (bypass review)	Same	PRODUCT_PUBLISH_DIRECT (opt-in)
View incoming orders + filter by status	/dashboard/vendor/orders	ORDER_VIEW (default)
Mark order CONFIRMED → SHIPPED with real carrier + tracking	Order detail → modal	ORDER_FULFILL (default)
Add Spotify / YouTube media embeds to storefront	/dashboard/vendor/media	MEDIA_MANAGE (opt-in)
Create vendor events (album releases, concerts)	/dashboard/vendor/events	STOREFRONT_EDIT (default)
View sales analytics	/dashboard/vendor/analytics	ANALYTICS_VIEW (default)
Request payout	/dashboard/vendor/payouts "Request Payout"	PAYOUT_REQUEST (default)
Moderate vendor forum (delete topics, manage channels)	/dashboard/vendor/forum	FORUM_MANAGE (default)

Vendor onboarding notification flow:

Vendor applies → applicant gets confirmation email (pending implementation)
 → admin gets digest email next morning (pending implementation)

Admin approves → applicant gets "VENDOR_WELCOME" email ✓

Admin rejects → applicant gets "we couldn't approve you" + reason (pending impl)

Fan places order → admin gets new-order email ✓
 → vendor gets new-order email (per affected vendor) ✓ (NEW Sprint 12)

Fan requests refund → vendor gets informational email ✓ (NEW Sprint 12)

4.3 Platform Admin Journey

The admin console serves the back-office operator (you + future operations hires). It is divided into **6 functional areas**, each a sidebar group:

High-impact admin flows:

1. **Vendor approval** — Pending tab → click vendor → review application → "Approve" triggers welcome email, full permissions grant, store goes live.
2. **Product approval** — Pending products queue → preview → approve (publishes immediately) or reject with reason (vendor sees feedback).

3. **Refund approval** — Refund-requested orders surface as alert banner → "Review" opens RefundReviewModal → approve triggers customer notification + lyzico refund + audit log.
 4. **Depot arrival** — When fan returns a refund package, admin marks `ARRIVED_AT_DEPOT` → triggers customer "we received it" notification + automatic refund-approval eligibility.
 5. **Push broadcast** — Single button sends a push to every registered device. Typed-confirmation modal prevents accidents. Audit-logged.
 6. **Payout management** — Vendor-requested payouts (PENDING) → admin reviews → moves through PROCESSING → PAID. Optional bulk approval.
 7. **Hero banner curation** — Admin uploads campaign banners that appear on homepage, can localize TR/EN, schedule by date, sort order.
 8. **NFC tag industrial tooling** — Bulk-generate 10,000 NFC tag UUIDs, assign to products, track scan counts, reset/revoke.
-

5. Platform Capabilities Map (by business function)

Commerce

- Multi-vendor catalog with category taxonomy
- Variant system (size/color/material/etc.) with per-variant pricing override + stock + low-stock thresholds
- Pre-orders with configurable window + limit + ship date
- Server-side cart (persistent across devices)
- Address book + checkout flow
- lyzico payment integration with 3D Secure, installments
- Mock-pay path for staging/demo (production-gated)
- e-Arşiv invoice auto-generation post-payment (Foriba)
- Order lifecycle: PLACED → CONFIRMED → SHIPPED → DELIVERED, with CANCELLED + REFUND_REQUESTED + REFUNDED branches
- Refund workflow with VH-RET barcode return shipment
- Vendor payout request system with auto-computed amounts from delivered orders
- Platform commission per vendor (configurable rate)

Discovery & Marketing

- Full-text product search (Meilisearch optional, Prisma LIKE fallback)
- Category browsing with localized names
- Tag-based discovery
- Hero banner curation

- Trending / new / featured product slots
- Vendor profile pages with media embeds (Spotify, YouTube)
- Vendor event listings (concerts, releases)
- Forum (per-vendor channels + topics + threaded replies + reactions)
- Cross-vendor follow + direct messages
- Newsletter capture (local-storage MVP)
- SEO: full sitemap, robots.txt, JSON-LD (Product / Organization / WebSite / Breadcrumb / FAQ / Article schemas), Open Graph + Twitter Cards on every page, hreflang TR/EN
- Google Merchant Center RSS feed (auto-generated)

Social & Community

- User profile pages (/u/[nickname]) with ghost-mode
- Profile visitors (with mutual visibility)
- Follow/follower system
- Direct messages between users
- Forum participation (vendor-moderated)
- Wishlists
- Product reviews with admin moderation

Trust & Safety

- MFA mandatory at login (6-digit email OTP, 5-min TTL, 30s resend cooldown, 5 max attempts)
- Persistent trusted devices (365 days)
- Account lockout with exponential escalation (1m → 5m → 15m → 1h)
- 59-event audit log catalog (login successes/failures, admin actions, content changes, refunds, payouts)
- Daily security digest email to all admins (8AM Istanbul)
- Honeypot routes for injection-attack detection
- KVKK-compliant data erasure (anonymize-not-delete for accounting trails, full purge for sensitive PII)
- Throttling on auth endpoints (5/min OTP, 10/min login, 5/hour password reset)
- httpOnly + secure refresh token cookies; secure session JWT
- Sentry error monitoring with source maps
- Audit-log 12-month retention with automatic monthly prune cron

Mobile-Native

- Cinematic splash animation (diagonal-split brand reveal)

- System default theme (auto light/dark)
- Persistent session (no re-login between app opens)
- Push notifications (Expo Push + FCM ready)
- NFC tag scanning (read-only on iOS, full read/write on Android)
- Barcode scanning
- Biometric authentication (Face ID / Touch ID / fingerprint)
- Camera access for profile photos
- Calendar integration for vendor events
- 5 bottom-tab navigation: Home / Shop / Forum / Profile / Scan
- Apple-style icon palette + brand-matched gradients

6. Technical Foundation (high level)

For engineering depth, see [docs/ARCHITECTURE.md](#).

Layer	Technology	Notes
Backend API	NestJS (TypeScript), 31 modules, ~256 endpoints	Industrial-strength framework used by Adidas, Roche, Capgemini
Database	PostgreSQL 16, 36 models, 35 migrations	Self-hosted on VPS; backups daily
Job queue	Redis 7 + BullMQ	Mail delivery, push notifications, scheduled jobs
Web app	Next.js 14 App Router (React), ~55 pages	Server-side rendering for SEO, hybrid SSG for performance
Mobile app	Expo SDK 52 + React Native 0.76	Code-sharing across iOS + Android, instant OTA updates capability
Hosting	Single VPS, Docker Compose	Nginx reverse proxy, 4 containers, ~\$500/mo
CI/CD	GitHub Actions	Push to main → typecheck → SSH deploy → health check
Search	Meilisearch (optional)	Falls back to PostgreSQL full-text
Email	Nodemailer + SMTP	Provider-agnostic; can swap to Resend / Postmark / SES
Error monitoring	Sentry	Live on backend + mobile
Observability	Daily security digest, business metrics dashboard, queue health endpoint	All built-in, no third-party APM needed

Why this stack matters for an executive audience:

- **TypeScript end-to-end** — type safety prevents 60-80% of common bugs at compile time. The codebase is fully typed.
- **Open-source foundation** — no vendor lock-in. Could migrate from VPS to AWS / GCP / Hetzner Cloud in days, not months.
- **Docker-containerized** — every environment is identical. New developer onboarding takes < 2 hours.
- **GitHub Actions auto-deploy** — every push to main is deployed within 5 minutes. Zero-downtime via container rebuild.
- **Single-VPS economics** — current monthly infrastructure cost is roughly the price of one dinner. Scales to 100,000 users on the same setup with minor tuning.

7. Compliance & Trust Posture

KVKK (Turkish GDPR) Compliance

Requirement	Status
Aydınlatma Metni (Privacy Notice)	✅ Published at <code>/legal</code> and <code>/kvkk</code>
Explicit consent for terms + privacy + marketing	✅ Required at registration
Right to access (Article 11)	✅ Procedure documented (RUNBOOKS §2a)
Right to erasure (Article 11)	✅ Implemented in app + admin-triggerable; anonymizes for accounting integrity, purges sensitive PII, retains audit log with anonymized actor
Right to data portability	✅ JSON export available via runbook procedure
Right to rectification	✅ Self-service via <code>/profile/settings</code>
Data Protection Officer (KVK Uzmanı)	⌚ Needs designation before public launch with > 50 customers
KVK Kurumu (VERBIS) registration	⌚ Required once user count + employee count exceeds thresholds
Cross-border data transfer notice	✅ All data on Turkish VPS; no cross-border transfer

E-Arsiy (Turkish e-Invoice) Compliance

- All consumer purchases auto-issue e-Arşiv invoices via Foriba integration
- Per-category KDV (VAT) rates applied correctly (mostly %20, with %1/%8/%18 supported)
- Currently mock-mode pending Foriba production agreement
- Invoice numbering, retention, accessibility — all KDV regulation-compliant

Consumer Protection (6502 Sayılı Kanun)

- 14-day cooling-off right (cayma hakkı) honored via refund workflow
- Return shipping cost: pending business decision (currently fan-paid, can flip to platform-paid via free-shipping-threshold)
- Distance contract pre-information shown at checkout (terms acceptance gated)
- Order cancellation by buyer supported pre-shipment

Security Posture

Control	Implementation
Encryption at rest	PostgreSQL with disk-level encryption (VPS provider)
Encryption in transit	TLS 1.3 on all endpoints (Nginx + Let's Encrypt)
Authentication	MFA mandatory; bcrypt password hashing (cost factor 12); JWT short-lived (15min) + rotating refresh
Session management	Trusted devices with explicit user grant; revocation UI in /profile/settings
Authorization	Role-based (5 roles) + capability-based (15 vendor permissions); all enforced at API + UI
Input validation	Strict whitelist on every DTO; unknown fields rejected at controller boundary
Rate limiting	Per-endpoint throttling; account lockout with exponential backoff
Audit trail	59 distinct event types logged; daily admin digest; 12-month retention
Vulnerability response	Sentry alerts on errors; GitHub Dependabot for npm advisories

8. Current State Metrics

Code & Scale

Metric	Value
Backend modules	31
API endpoints	~256
Database models	36
Database enums	19
Database migrations	35
Web pages	~55
Mobile screens	~30
Email templates	11
Audit event types	59
Vendor permissions	15
Background job queues	1 (mail) + scheduled crons

Development velocity

- 12 completed sprints (each ~3–7 days of work)
- ~50 distinct features shipped in last 90 days
- Mean time from feature idea → production deployment: < 24 hours
- Test coverage: critical money paths covered with smoke tests; broader coverage is a Sprint 13 target

Production health (as of brief date)

Metric	Status
Deploys per week (push-to-prod)	5-15
Uptime since soft-launch	99.9%+
Mean response time (API)	< 100ms p50
Frontend Lighthouse score (Performance)	90+
Daily backup verification	✅ automated cron
Sentry error rate	< 0.1% of requests

Beta state

- 4 admin users (founder + ops collaborators)
- 4 test vendors (kalt, modexl, tekir, +1)
- 0 paying customers (pre-launch)

9. Roadmap

0–30 days (pre-launch)

Track	Deliverable	Blocker
Payment	Sign lyzico contract, swap mock keys for live	External (lyzico onboarding)
Shipping	Sign Aras + Yurtiçi API contracts, swap mock keys	External (carrier onboarding)
E-invoice	Activate Foriba production account	External (Foriba onboarding)
Soft-launch	Recruit 5-10 friendly artists for beta cohort	Internal (outreach)
Mobile	Apple + Google developer account verification	External (Apple + Google verification queues)
Operations	Sign data-processor agreements (KVKK Article 12 — for SMTP provider, Sentry, Foriba, kargo carriers)	Legal review
Marketing	Press release draft, launch landing page, social calendar	Internal

30–90 days (post-launch)

- Onboard 50+ vendors
- Reach ₺100K monthly GMV
- Mobile app on App Store + Google Play
- A/B test free shipping threshold optimization
- First social media advertising campaign
- Customer support workflow with email + WhatsApp integration

90–180 days (scale)

- Onboard 200+ vendors covering top 100 Turkish artists
- Vendor manager invite flow + multi-staff vendor accounts

- Promo code system (artist-specific, time-windowed)
- Bundle products (e.g., album + t-shirt at discount)
- Loyalty / points program for repeat fans
- Vendor-side mobile companion app (manage orders on the go)
- International shipping support (priority: Germany, Netherlands — Turkish diaspora hubs)

180–365 days (platform expansion)

- Live shopping events (vendor goes live, fans buy in real-time)
 - NFC-unlocked exclusive content for verified merch owners
 - Subscription tier for fans (early access, signed items, monthly merch boxes)
 - API for third-party integrations (Spotify "buy artist merch" deep link, Instagram shoppable posts)
 - Marketplace for digital products (album downloads, ticket pre-sales, exclusive videos)
 - Expansion to comedians + influencers + esports teams as adjacent verticals
-

10. Risk Register

Risk	Likelihood	Impact	Mitigation
lyzico contract delays	Medium	High (blocks launch)	Mock-pay path keeps demo working; can swap to PayTR as backup
Carrier API integration issues at scale	Low	Medium	Dual-carrier (Aras + Yurtiçi) provides failover; manual override possible from admin
Single VPS failure	Low	High	Daily backups; can restore to new VPS in < 1 hour; runbook documented
KVKK violation (data leak)	Low	Critical	Annual security review, Sentry alerting, MFA mandatory, encrypted backups, retention policies, KVKK Uzmanı designation pre-launch
Artist acquisition stalls	Medium	High	Soft-launch with handpicked artists; commission rate negotiable for top names; press around "first 50 artists"
Trendyol / Hepsiburada launches creator-focused vertical	Medium	High	Differentiation via NFC authenticity + artist-first design + KVKK posture; speed-to-market advantage if launched first
Payment fraud / chargebacks	Medium	Medium	lyzico fraud screening; manual review for orders > ₺2,000; audit log enables forensic investigation
Counterfeit listings	Low	High	NFC tag verification system; manual product approval; copyright takedown procedure (DMCA-equivalent under KHK 6769)
Founder bus-factor (sole developer)	Currently High	Critical	Comprehensive docs (ARCHITECTURE.md, RUNBOOKS.md, KIND of SKILL.md for AI handoff); plan to hire technical co-founder or senior engineer in 90 days
Mobile app rejection (Apple / Google)	Medium	Medium	Conservative permission usage, KVKK compliance, no risky integrations; web fallback always available

11. What's Needed Next

Decisions pending (founder + advisors)

1. **Payment provider final selection** — lyzico recommended; PayTR is a viable alternative. Sign and integrate within 14 days.
2. **Free shipping threshold** — Recommendation: ₺500 (industry-aligned, encourages basket size growth). Currently configurable.
3. **Platform commission rate** — Recommendation: 12-15% (Trendyol charges 18-25% on similar categories; positioning advantage).
4. **Mock-pay endpoint** — Already production-gated; needs final teardown timing with marketing team.
5. **Soft-launch cohort size** — Recommendation: 5-10 vendors, 25-50 fans, 3-week beta with weekly retros.

External relationships to formalize

- lyzico merchant agreement (or PayTR)
- Aras Kargo + Yurtiçi Kargo API access (often free; sometimes ₺500/mo per carrier)
- Foriba e-Arşiv subscription (~₺200/mo)
- SMTP provider (Postmark or Mailgun recommended; currently provider-agnostic SMTP supported)
- Apple Developer Account (\$99/year) — in progress
- Google Play Developer Account (\$25 one-time) — in progress
- Legal counsel for KVK Uzmanı designation + VERBIS registration timing

Capital / runway

- Current monthly burn (infrastructure only): ~₺500-1,000
- Estimated monthly burn at 1,000 monthly active customers: ~₺3,000-5,000 (infrastructure + payment processor fees + SMTP costs)
- Break-even GMV at 12% commission: ~₺40,000/month
- Realistic 6-month target: ~₺300,000/month GMV (~50 active artists, 1,500 customers, 4 orders/customer/year)
- Aspirational 12-month target: ~₺2,000,000/month GMV (top 200 Turkish artists onboarded)

Hiring priorities (in order)

1. **Technical co-founder / Lead Engineer** — to reduce founder bus-factor, share on-call rotation
2. **Operations / Customer Success Lead** — vendor onboarding, fan support, light moderation

3. Marketing / Creator Partnerships Lead — artist outreach, social presence, PR

12. Appendix — Integration Status

Integration	Purpose	Current State	Production Readiness
lyzico (payment)	Card processing, 3D Secure, installments	Mock fallback 	100% — needs live API key
Aras Kargo (shipping)	Domestic delivery + tracking	Mock fallback 	100% — needs API contract
Yurtiçi Kargo (shipping)	Alternative carrier	Mock fallback 	100% — needs API contract
Foriba (e-Arşiv)	Auto-invoice generation	Mock fallback 	100% — needs production account
Sentry (monitoring)	Error tracking	Live 	Production
SMTP (email)	Transactional mail	Live or stdout-fallback 	Production-capable
Meilisearch (search)	Full-text product search	Optional, falls back to PostgreSQL	Production-capable, optional
Expo Push (mobile)	Push notifications	Token registration live, broadcast UI built	Production
Google Merchant Center	Product feed for Google Shopping	RSS feed live	Production — needs Search Console submission
Cloudflare R2 / S3	Media storage	Architecture-ready, currently local disk	80% — code migration ~1 day
KVKK VERBIS registration	Regulatory registration	Pending designation of DPO	Triggered by user count threshold

13. Appendix — Glossary (for non-technical readers)

- **KVKK** — Kişisel Verilerin Korunması Kanunu (Turkish equivalent of EU GDPR)
- **e-Arsiv** — Turkish electronic-archive invoice format, mandatory for B2C sales
- **KDV** — Katma Değer Vergisi (Turkish VAT, currently 20% for general merchandise)
- **GMV** — Gross Merchandise Value (total transaction value before commission/refunds)
- **AOV** — Average Order Value

- **MAU** — Monthly Active Users
 - **NFC** — Near-Field Communication (contactless tag scanning, used for product authenticity)
 - **MFA** — Multi-Factor Authentication (in our case: email OTP)
 - **OTP** — One-Time Password (6-digit code sent via email)
 - **SLA** — Service Level Agreement
 - **RTO** — Recovery Time Objective (max acceptable downtime after incident)
 - **VPS** — Virtual Private Server (the single rented server hosting all production services)
 - **CDN** — Content Delivery Network (currently none; potential future optimization)
 - **PDP** — Product Detail Page
-
